

MARKET RELEASE

Date: 20 APRIL 2022

NZX: GNE / ASX: GNE

FY22 Q3 Performance Report

Genesis continues to deliver improvements in customer loyalty through Power Shout and the home move experience. Brand satisfaction is at a record high and customer churn is down below 13%. Carbon emissions were down 63% on last year, driven by increased hydro inflows, higher gas production and a full quarter's production of Waipipi wind.

Marc England, Chief Executive

Retail

- Brand Net Promoter Score of 29 points. Up 11 points on pcp¹.
- Gas Netback of \$17.5/GJ. Up 54% on pcp.
- 67% of new C&I customers signed up to Energy Services in FY22 year to date.

Wholesale

- Genesis lakes finished the quarter with 421 GWh of hydro storage, 132% of average.
- Generation emissions of 404 kT CO2. Down 63% on pcp.
- Portfolio fuel cost of \$61/MWh. Down 6% on pcp.

Kupe

- Gas production of 2.9 PJ. Up 21% on pcp.
- LPG production of 11.9 kt. Up 13% on pcp.
- Realised oil price of \$99/bbl. Up 27% on pcp.

About Genesis Energy

Genesis Energy (NZX: GNE, ASX: GNE) is a diversified New Zealand energy company. Genesis sells electricity, reticulated natural gas and LPG through its retail brands of Genesis and Frank Energy and is New Zealand's largest energy retailer with approximately 500,000 customers. The Company generates electricity from a diverse portfolio of thermal and renewable generation assets located in different parts of the country. Genesis also has a 46% interest in the Kupe Joint Venture, which owns the Kupe Oil and Gas Field offshore of Taranaki, New Zealand. Genesis had revenue of \$NZ3.2 billion during the 12 months ended 30 June 2021. More information can be found at www.genesisenergy.co.nz

27% increase on pcp

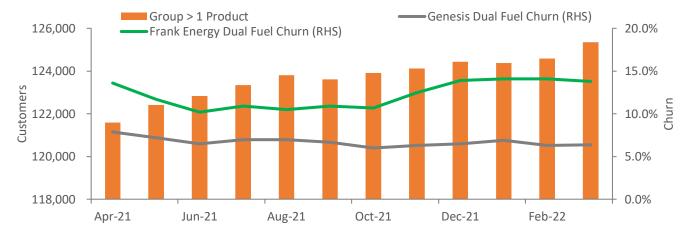

Retail Segment

- Genesis continued to invest in customer loyalty through our Power Shout and Home Mover programmes. Trader and home mover switching declined, with net churn reducing to 12.8%. Brand NPS continued to increase, up to 29 points.
- Customer numbers were down 1.5% on pcp. Declines in electricity and gas single fuel customers were partially offset by duel-fuel and LPG growth.
- Netbacks continued to grow, with all fuels increasing on pcp. Gas was especially strong, with netback increasing by 54% as higher wholesale prices were passed on.
- Genesis' LPG customer numbers and volumes continued to grow in the period, albeit at a slower rate than previous quarters. COVID continued to reduce consumption, especially in hospitality and other SME businesses. The month of March saw an increase in consumption as businesses bounced back from lockdown. This is expected to continue in Q4.
- Genesis' C&I segment continued to focus on value, with 67% of new customers in FY22 utilising energy services. The market remains competitive and sales volumes (462 GWh) were 18% lower than pcp.

C&I CUSTOMERS UTILISING ENERGY SERVICES

RESIDENTIAL DUAL FUEL CUSTOMER NUMBERS & CHURN (3-MONTH ROLLING AVERAGE %)

Wholesale and Kupe Segments

Wholesale Segment

- Hydro conditions remain strong, with weather conditions favourable for Genesis' North Island catchments. Lake Waikaremoana received especially high inflows and has 170 GWh of storage.
- Carbon emissions declined significantly, down 63% on pcp. This was driven by increased Waipipi generation, hydro conditions and increased gas availability displacing Rankine generation.
- Genesis completed two major generation projects in the quarter, the Tekapo B runner replacement and Huntly Unit 2 statutory outage. Ongoing work at two Waikaremoana Stations fell behind schedule due to shipping delays. Piripaua is expected to return to service in April and Tuai in May.

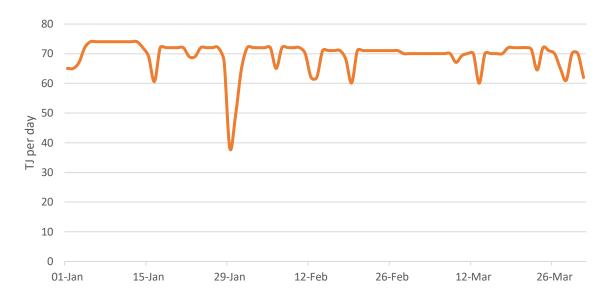

Kupe Segment

- Following completion of the Kupe inlet compression project in Q1 FY22, production reached plant capacity of 77 TJ/day. Since commissioning, well deliverability has declined faster than expected and has impacted the ability to reach daily capacity rates. Despite this, total FY22 production remains on target, due to strong demand.
- Opportunities to increase well productivity and production rates are being assessed and include in-wellbore intervention activities and development well drilling. Subsurface analysis, planning and regulatory activities for a potential development well continued during the quarter.

RETAIL

Based on survey question "How likely would you be to recommend Genesis Energy/Frank Energy to your friends or family?"
Based on survey question "Based on your recent Interaction With GE/Frank Energy, how likely would you be to recommend
GE/Frank Energy to your Friends/Family?"
Electricity and gas customers are defined by single customer view, regardless of number of connections (ICP's)
Represents unique customers which may have multiple ICP's
Installation Connection Point, a connection point that is both occupied and has not been disconnected (Active-Occupied)
Defined as number of customers
Defined as customers instigating a trader switch or home move
Defined as Gross Churn post home move saves, retention and acquisition activity
Residential, small and medium enterprises and commercial & industrial customers
Business to Business, including both SME and C&I
Average selling price for customers including lines/transmission and distribution and after discounts
Average selling price for customers including transmission and distribution and after discounts
Average selling price for customers including after discounts
Represents 45kg LPG bottle sales
Represents SME and other bulk and 3rd party distributors
Retail costs associated with serving customers across all fuel types divided by the total numbers of ICPs at time of reporting
Customer EBITDAF by fuel type plus respective fuel purchase cost divided by total fuel sales volumes, stated in native fuel units
(excluding corporate allocation costs and Technology & Digital cost centre)
Excludes settlements from electricity derivatives.
Coal generation is calculated by applying coal burn to monthly average heat rates
Results have been revised to reflect changes in coal kilo tonnes to PJ conversion rate and volume methodology
The proportion of coal used in the Rankine units
The percentage of time a power station is available to generate electricity
The percentage of time a power station is unavailable to generate electricity due to unplanned failure or defect
Energy purchased through long term agreements with generator
Price received at production node. (E.g. Waipipi at WVY1101 node)
